Paramedic Lab Manual Dec 15 2021 Welcome to the stimulating and challenging world of EMS education. This lab manual was devised to aid you in the pursuit of your educational goals. Developed to document compliance with the 1998 DOT National Standard Curriculum (NSC) psychomotor and affective domain objectives, completion of the skills (one sheet per skill) and all the scenarios ensures that programs meet CAAHEP/CoAEMSP Joint Review for National Accreditation. The understanding that lab experiences are an integral part of your educational experience needs to be embraced. Prepare for your labs beforehand by reading the required skills, "Daily Discussions and Pertinent Points" and the corresponding chapter(s) in your textbook. The lab manual is designed to be used in coordination with the Brady text for explanations of the procedures and theories behind the skills. "Fabulous Factoids" make interesting reading - trivia gleaned from the Brady text, books, and programs on The Learning Channel and Discovery. The "Pathophysiology" section covers all the 1998 NSC pathophysiology objectives, and the scenarios assigned to each section meet the diagnosis-based patient assessment requirements of the curriculum. The manual itself is a comprehensive compilation of the psychomotor and affective domain objectives required by the 1998 NSC. It also meets many of the cognitive domain objectives. If utilized as designed by the authors, students and educators can be assured that they are in compliance with the psychomotor, affective domain and pathophysiology essentials in the NSC. Please understand, however, that no hands-on (psychomotor) skill is learned from reading a book. Competence in performing these skills will be achieved under the guidance of the experienced, qualified instructors your program provides in your classroom, lab and clinical areas. It is the sincere hope that this manual is implemented as a valuable resource to your EMS education. THANK YOU!

"This is a must buy for any student from school leaver to the mature candidate who is thinking of studying to be a Paramedic. The book comprehensively addresses everything from where and how to apply, unpicking the complex picture of fees and funding to the realities of what to expect when you get to University and what it's like on placement. With valuable contributions from current students, academics and educators this book explains everything you need to know and might not have thought you needed to know before you apply." Mark Nevins, Senior Lecturer, Teeside University, UK, and NMC Registered Adult Nurse and HCPC Registered Paramedic "I would consider this book as required reading for anyone considering embarking on a career as a paramedic. It is honest, informative and true to life. I liked the way that all aspects of student life were covered, from applications, to studying and placements and finally being out in the world. This job isn't what a lot of people seem to think it is but Amanda has gone to great lengths to myth bust. This book shows a depth and consideration that all prospective paramedic students should appreciate. It is clear that a great deal of effort has gone into this survival guide." Mark Young, Paramedic & Practice Placement Educator, South East Coast Ambulance Service, UK "I liked the way that the book utilises a cross-section of students, practitioners and academics when providing opinions on the student paramedic journey, as this provides the triangulation required to ensure the views presented are representative of the student paramedic arena. It will provide a useful guide to the mysteries of the student journey. It is also useful that it illustrates the differences across the whole of the UK and considers the different approaches and how they can change the coping mechanisms that need to be used, and that are in place. The 4 sections provide an excellent overview of the 4 areas that most student paramedics want to, and need to, know, and answers a number of the questions (if not all) asked very effectively. The sections also support the needs of the profession, as well as the students own professional journey; covering a number of areas that are part of the institutional and ambulance Trusts inductions. It is useful to note that the Survival Guide also recognises the differences the student paramedic experiences when compared to other students in universities. This means that the Survival Guide can act as an 'aide memoire' that is available when those difficult questions come up that need an immediate answer that can allay fears and anxieties and signpost the students to the places they can get support. This aspect is helped by the shared experiences from past and present students and practitioners, who act as mentors and paramedic educators to the students. This book has been a long time coming and will, based on my experience, help the student to have a better transition towards their future professional role." Lizzie Ryan, Education Business Manager and Clinical Training Manager (East) at South Western Ambulance Service NHS Foundation Trust, UK, also Lecturer at Bournemouth University, UK and Plymouth University, UK and the Open University, UK
