Health Professions Education Dec 11 2020 The Institute of Medicine study *Crossing the Quality Chasm* (2001) recommended that an interdisciplinary summit be held to further reform of health professions education in order to enhance quality and patient safety. *Health Professions Education: A Bridge to Quality* is the follow up to that summit, held in June 2002, where 150 participants across disciplines and occupations developed ideas about how to integrate a core set of competencies into health professions education. These core competencies include patient-centered care, interdisciplinary teams, evidence-based practice, quality improvement, and informatics. This book recommends a mix of approaches to health education improvement, including those related to oversight processes, the training environment, research, public reporting, and leadership. Educators, administrators, and health professionals can use this book to help achieve an approach to education that better prepares clinicians to meet both the needs of patients and the requirements of a changing health care system.

Primary Health Care: People, Practice, Place Feb 10 2021 Health care is constantly undergoing change and refinement resulting from the adoption of new practices and technologies, the changing nature of societies and populations, and also shifts in the very places from which care is delivered. Primary Health Care: People, Practice, Place draws together significant contributions from established experts across a variety of disciplines to focus on such changes in primary health care, not only because it is the most basic and integral form of health service delivery, but also because it is an area to which geographers have made significant contributions and to which other scholars have engaged in 'thinking geographically' about its core concepts and issues. Including perspectives from both consumers and producers, it moves beyond geographical accounts of the context of health service provision through its explicit focus on the practice of primary health care. With arguments well-supported by empirical research, this book will appeal not only to scholars across a range of social and health sciences, but also to professionals involved in health services.

Knowledge Translation in Health Care Sep 27 2019 Health care systems worldwide are faced with the challenge of improving the quality of care. Providing evidence from health research is necessary but not sufficient for the provision of

Knowledge Translation in Health Care explains how to use research findings to improve health care in real life, everyday situations. The authors define and describe knowledge translation, and outline strategies for successful knowledge translation in practice and policy making. The book is full of examples of how knowledge translation models work in closing the gap between evidence and action. Written by a team of authors closely involved in the development of knowledge translation this unique book aims to extend understanding and implementation worldwide. It is an introductory guide to an emerging hot topic in evidence-based care and essential for health policy makers, researchers, managers, clinicians and trainees.

The Future of Nursing Mar 26 2022 *The Future of Nursing* explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.

Communication and Professional Relationships in Healthcare Practice Mar 14 2021 *Communication and Professional Relationships in Healthcare Practice* focuses on the crucial role that spoken interactions play in shaping relationships in contemporary healthcare practice. The authors apply theoretical concepts of communication to the workplace of healthcare, drawing upon scenarios based in the settings of clinical experience. The book presents a wide range of interactions (including consultations, team meetings, dialogues and casual conversations) between health professionals, their colleagues and their clients or patients in a variety of settings. Drawing on the latest research in applied linguistics and professional communication, the authors introduce readers to a number of approaches that can be used to analyse these interactions. Using these techniques, readers will discover exactly how central themes of healthcare practice (including trust, empathy, expertise and breaking bad news) are constructed through the communicative choices that participants make in these interactions. Designed specifically for medical, nursing and allied health practitioners with an

interest in communication, the book makes the techniques of discourse analysis accessible and provides ample opportunities for individual practitioners to apply this knowledge to their own professional contexts. Reviews: Refreshingly, the book addresses communication not only in interactions between health professionals and patients, but amongst team members and between health professionals in an array of communicatively challenging real world contexts. It brings home to the reader the complexity of communication in health care, and it offers practitioners many tools for reflecting on their own and others' communicative practices, and for enhancing their professional interactions. Dr Catherine O'Grady, Educator and Applied Linguist -Health Communication

Assessing Progress on the Institute of Medicine Report The Future of Nursing Nov 29 2019 Nurses make up the largest segment of the health care profession, with 3 million registered nurses in the United States. Nurses work in a wide variety of settings, including hospitals, public health centers, schools, and homes, and provide a continuum of services, including direct patient care, health promotion, patient education, and coordination of care. They serve in leadership roles, are researchers, and work to improve health care policy. As the health care system undergoes transformation due in part to the Affordable Care Act (ACA), the nursing profession is making a wide-reaching impact by providing and affecting quality, patient-centered, accessible, and affordable care. In 2010, the Institute of Medicine (IOM) released the report *The Future of Nursing: Leading Change, Advancing Health*, which made a series of recommendations pertaining to roles for nurses in the new health care landscape. This current report assesses progress made by the Robert Wood Johnson Foundation/AARP Future of Nursing: Campaign for Action and others in implementing the recommendations from the 2010 report and identifies areas that should be emphasized over the next 5 years to make further progress toward these goals.

Social Work and Health Care Practice with Transgender and Nonbinary Individuals and Communities Nov 21 2021 This book examines issues across the lifespan of transgender and nonbinary individuals whilst synthesizing conceptual work, empirical evidence, pedagogical content, educational experiences, and the voices of transgender and nonbinary individuals. Significant need for services and support coupled with social, clinical, and medical service systems ill-equipped to provide culturally responsive care illustrates the critical need for quality education and training of educators, practitioners, and service providers in best practices of working with members of the transgender and nonbinary community. Organized into six sections: Health Areas of Practice Coming Out and Family Relationships and Sexuality Communities Multiply Marginalized Identities and Populations, this book offers a

current, comprehensive, and intersectional guide for students, practitioners, and researchers across a variety of professions, including social work, psychology, public policy, and health care.

Throughout the discussions, concepts and themes are considered in relation to four specific lenses: the power lens, the diversity lens, the language lens and the transitioning from theory to practice lens. These lenses serve to ensure that the reader adopts a critical understanding of the professional issues in the field and is able to develop his or her own professional identity while mitigating the power and identity issues necessarily associated with being a practitioner in a helping profession. This book was published as a special issue of *Child and Youth Services*.

Spiritual Care in Practice Sep 07 2020 These diverse case studies make a compelling case for the importance of effective spiritual care in healthcare and provide unprecedented insight into the essential role of the chaplain within the healthcare team. Presented alongside critical reflections and responses from professionals within chaplaincy, psychology, psychiatry and nursing, they provide an honest and detailed look into how healthcare chaplains actually work with the people in their care and reveal the vital role of narrative and imagination in effective transformative practice. From a 16-year-old with a belief that God would enable a miraculous recovery from paralysis, to an African man with a history of psychosis and depression whose cultural belief in witches complicated his treatment, to a dying Jewish man, aggressive and isolated due to his traumatic life experiences, each case includes insight into the patient's needs and chaplain's perspectives, discussion of spiritual assessments and spiritual care interventions, and accounts of significant encounters and dialogues. The nine paediatric, psychiatric and palliative case studies and reflections in this ground-breaking book will enable chaplains to critically reflect on the spiritual care they provide and communicate their work more effectively, help healthcare professionals develop a clearer understanding of the care chaplains deliver, and provide an informed

perspective for those who develop policy around spiritual care and need to make the case for chaplaincy services.

Primary Care in Practice Jun 04 2020 The development of the Chronic Care Model (CCM) for the care of patients with chronic diseases has focused on the integration of taking charge of the patient and his family within primary care. The major critical issues in the implementation of the CCM principles are the non-application of the best practices, defined by EBM guidelines, the lack of care coordination and active follow-up of clinical outcomes, and by inadequately trained patients, who are unable to manage their illnesses. This book focuses on these points: the value of an integrated approach to some chronic conditions, the value of the care coordination across the continuum of the illness, the importance of an evidence-based management, and the enormous value of the patients involvement in the struggle against their conditions, without forgetting the essential role of the caregivers and the community when the diseases become profoundly disabling.

Care in Practice Nov 02 2022 In what way is »care« a matter of »tinkering«? Rather than presenting care as a (preferably »warm«) relation between human beings, the various contributions to the volume give the material world (usually cast as »cold«) a prominent place in their analysis. Thus, this book does not continue to oppose care and technology, but contributes to rethinking both in such a way that they can be analysed together. Technology is not cast as a functional tool, easy to control - it is shifting, changing, surprising and adaptable. In care practices all »things« are (and have to be) tinkered with persistently. Knowledge is fluid, too. Rather than a set of general rules, the knowledges (in the plural) relevant to care practices are as adaptable and in need of adaptation as the technologies, the bodies, the people, and the daily lives involved.
